

IEMA International Certificate

Overview

This programme enables delegates to develop a competitive edge in their business by being able to effectively review business practise, manage the carbon footprint and ensure that growth is both sustainable and has a positive impact on the environment. Delegates will be able to comply with International legislative requirements and recognise how to work with global expectations on environmental issues

Duration

10 Days

PPTplus

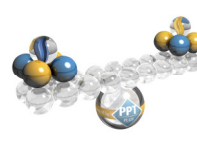

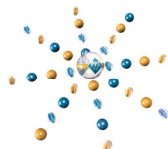

International training with Pivotal Performance includes PPTplus. This is your guarantee of consistently high quality training worldwide. Wherever you work, your training will focus on practical application and inspire you with the self confidence to make a positive impact back at work.

Who Should Attend

This course is aimed primarily towards Health and Safety professionals with an international role that requires an environmental qualification, and for facilities managers with an international remit.

Course Content Includes

- The concepts and principles and nature of International Environmental Law
- The relationship between typical regulatory regimes, international, national and regional environmental policy

Course Content Continued

- Key areas of International Environmental Law e.g. marine pollution, deforestation, ozone depletion, desertification, biodiversity, global environmental protection, management of hazardous substances and chemicals, prevention and control of pollution and management and conservation of natural resources.
- Global environmental issues and an understanding of how these contribute to the development of international treaties, protocols and guidelines and how are they implemented into national legislation.
- Key International Environmental Agreements / MEAs (Multilateral Environmental Agreements), International treaties, conventions and protocols.
- The compliance, enforcement and effectiveness of international treaties, protocols, agreements and conventions
- An understanding of the EU or other relevant legislative process
- International trade agreements and their effect on the movement of goods and services
- Sources of information on Environmental Law in-country
